protein tyrosine phosphatase (VE-PTP) that specifically interacts with receptor-type tyrosine kinase Tie-2, modulating its tyrosine phosphorylation. Tie-2 is involved in angiogenetic processes, the formation of blood vessels during embryonal development, wound healing and in pathological processes such as tumour development. WE-PTPs such as HPTP-beta or its catalytic domain, nucleic acids and ligands can be used to monitor, stimulate or repress Tie-2 activity for the purpose of monitoring or modulating angiogenesis, inducing or inhibiting vascular growth or medelling and blood vessel maturation, and inhibiting tumour growth or metastasis
                                                                                                                                                                                                                                                                                                                                                                                                                                       GSLTSLKVKWQRPPGNVDSYNITLSHKGTIKESRVLAPWITETHFKELVPGRLYQVTVSC 360

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to the three dimensional coordinates of HPTPbeta also known as HPTP-beta, PTPB, PTPPeta, PTPB or R-PTP-beta) protein. It also known as HPTP-beta, PTPB or R-PTP or R-PTP or Gompound useful for the treatment of an amplogenessis mediated disorder. The compounds identified by this method are useful to treat diseases like diabetic retinopathy, sitch cell anaemia, Paget's disease, mycobacterial infections, systemic lupus erythematosus, myopia, Crohn's disease, psoriasis, rheumatoid arthritis, solid or blood borne tumours and acquired immune defliciency syndrome (AIDS). The invention is useful for the treatment of an angiogenesis mediated disorder or disease. It is also useful in drug design techniques. The present sequence is human HPTPbeta
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Identification of compound useful for treatment of angiogenesis mediated disorder, by using three-dimensional structure of HPTPbeta catalytic domain, and employing structure to design, or select compound that binds HPTPbeta in silico.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          9

Novel lung specific gene useful for identifying, diagnosing, monitoring, staging, imaging and treating lung cancer and non-cancerous disease states in lung, for gene therapy, and for identifying lung tissue.

Claim 2; Page 185-192; 197pp; English.

The present invention relates to lung specific genes (LSG) and their corresponding polypeptides. LSG is useful for identifying, diagnosing, monitoring, staging, imaging and treating lung cancer and non-cancerous disease states in lung, identifying lung tissue, monitoring and modifying lung embryonic development and differentiation, in gene therapy, as hybridisation probes, to detect LSG mRNA as a marker for lung cancer, as research reagents and materials for discovery of treatments and disease, to detect complementary polynucleotides, and for chromosome identification. An antibody which binds LSG is useful

×																	
•	· 0												. 0 0	·o o		·,	. 10
to detect or image localisation of LSG in a patient for detecting or diagnosing a disease or condition, for preventing the onset and treatmen of lung cancer, to isolate or to identify clones expressing LSG polypeptides, and to target tumours expressing LSG. The present sequence is human LSG protein Sequence 1997 AA;	Query Match Best Local Similarity 99.8%; Pred.                                       RESULT
```

The present invention describes a pharmaceutical composition comprising a nucleic acid (1) protein tyrosine phosphatase PTP10D, non-receptor concleic acid (1) protein tyrosine phosphatase PTP10D, non-receptor composition kinase Tec. egg derived tyrosine phosphatase (BDTP) gene family or encoded polypeptide, fragment or variant of nucleic acid molecule of PTP10D, Tec. or BDTP gene family or encoded composition can have antidiabetic, hypotensive, cardiant, antilipaemic, composition can have antidiabetic, hypotensive, cardiant, antilipaemic, composition can have antidiabetic, hypotensive, cardiant, antilipaemic, or steopathic, cytostatic, anorectic and immunomodulator activities, and can be used in gene therapy. The composition is useful for the antidiation of an agent for detecting and/or varifying, for treating and can a number of an agent for detecting and/or varifying, for treating and alleviating and/or preventing a disorder, including metabolic diseases such as obesity and other body weight regulation disorders, as well as the and other body weight regulation disorders, as well as calleviating and other body weight regulation disorders, as well as calleviating and other body weight regulation disorders, as well as calleviation of seconary heart disease, hypercholesterolaemia, dysolutive organ), sleep apnea, and other diseases, in cells, cell masses, organs and/or subjects. The components of the composition may also be used in controlling the function of a spene and/or gene product which is influenced and/or modified by a PTP10D, Tec, or EDTP family or their fragments, may be used in the PTP10D, Tec, or EDTP family or their fragments, may be used in the composition of a non-human animal which over- or under-expresses the compositions comprising tyrosine phosphatase PTP10D, protein tyrosine use Tec or egg-derived tyrosine phosphatase genes or proteins, useful treating or preventing metabolic diseases, e.g. as obesity or Claim 2; Fig 8B; 83pp; English. cachexia kinase

This invention relates to novel mitochondrial targets that can be used for therapeutic intervention in treating a disease associated with altered mitochondrial function. Specifically, it refers to a method for identifying proteins of the human heart mitochondrial proteome that are useful for drug screening assays, as well as therapeutic targets. The present invention describes a method for identifying such proteins that can be used in the treatment of various diseases associated with altered mitochondrial function including diabetes mellitus, Huntington's disease, osteoarthritis, Leber's hereditary optic neuropathy (LHON), mitochondrial concephalopathy lactic acidosis and stroke (MELAS), myoclonic epilepsy ragged red fibre syndrome (MERRP) or cancer. Accordingly, these compositions have neuroprotective, nootropic, antidiabetic, anticonvulsant, antiarthritic, osteopathic, ophthalmological and cytostatic activities. This polypeptide sequence is a human heart mitochondrial protein of the invention.
                                                                                                                                                                                                                                                                           Huntington's disease; ostecarthritis;
Leber's hereditary optic neuropathy; LHON;
antochondrial encephalogathy lactic acidosis and stroke; MELAS;
mycolonic epilepsy ragged red fibre syndrome; MERRF; cancer;
neuroprotective; noctropic; antidiabetic; anticonvulsant; antiarthritic;
osteopathic; ophthalmological; cytostatic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    treating diseases associated with altered mitochondrial function, comprises detecting a modified polypeptide in a sample and correlating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      MLSHGAGLALWITLSLLQTGLAEPERCNFTLAESKASSHSVSIQWRILGSPCNFSLIXSS

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78123-AAM80102) that exhibit activity elating to cytokine. Cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity, tissue growth factor activity, immunomodulatory activity and activity, tissue growth factor activity, immunomodulatory activity and activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation. Note: Records for SEQ ID NO 2110 (AAK52581), 2111 (AAK52582) and 3666 (AAM80020) are omitted as the relevant pages from the sequence listing were missing at the time of publication
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö

The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to pytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, immunomodulatory activity and activity tissue growth factor activity, immunomodulatory activity and activin/inhibin activity and may be useful in the diagnosis and/or ireatment of cancer, leuxaemia, nervous system disorders, arthritis and inflammation. Note: Records for SEQ ID NO 2110 (AAK52581), 2111 (AAK52582) and 3666 (AAM80020) are omitted as the relevant pages from the sequence listing were missing at the time of publication
                                                                                                                                                                                                                       Nucleic acids encoding polypeptides with cytokine-like activities, useful in diagnosis and gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           DILGAALCPTFRIDNTTYGCNLQDLQAGTIYNFKIISLDEERTVVLQTDPLPPARFGVSK 124

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to a polypeptide comprising vascular endothelial-protein tyrosine phosphatase (WE-PTP) or its active fragment or effector, or the nucleic acid encoding the polypeptide or its effector, for use in the manufacture of an agent for monitoring or modulating VE-cadherin mediated processes or disorders. The polypeptide comprising vascular endothelial-protein-tyrosine phosphatase (WE-PTP) or its active fragment or effector, or the nucleic acid encoding the polypeptide or its effector, is useful for the manufacture of an agent for monitoring or modulating VE-cadherin mediated processes or disorders,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention describes a pharmaceutical composition comprising a nucleic acid (I) protein tyrosine phosphatase PTP10D, non-receptor nucleic acid (I) protein tyrosine phosphatase PTP10D, non-receptor family or encoded polypeptide, frament or variant of mucleic acid molecule of PTP10D, Tec. or EDTP gene family or encoded polypeptide, an antibody, an aptamer or receptor recognising composition can have antidiabetic, hypotensive, cardiant, antilipaemic, polypeptide, and a carrier, diluent and/or adjuvant. The pharmaceutical composition can have antidiabetic, hypotensive, cardiant, antilipaemic, osteopathic, cytostatic, anorectic and immunomodulator activities, and can be used in gene therapy. The composition is useful for the manufacture of an agent for detecting and/or verifying, for treating and can preventing a disorder, including metabolic diseases and alleviating and/or preventing a disorder, including metabolic diseases cuch as obesity and other body weight regulation disorders, as well as trelated disorders such as eating disorder, cachexia, diabetes mellitus, hypertension, coronary heart disease, hypercholesterolemia, crelated disorders such as eating disorder, cachexia, diabetes mellitus, hypertension, coronary heart disease, hypercholesterolemia, crelated disorders such as obsitive and other body weight regulation disorders, as well as caproductive organ), sleep apnea, and other diseases, in cells, cell masses, organs and/or subjects. The components of the composition may calso be used in controlling the function of a perplob, Tec, or EDTP family or their fragments, may be used in the present and protein tyrosine phosphatase receptor type B precursor (PTPRB) chamin and animal which over or under-expresses the companion acid sequence, which is given in comment in comparison with brosphila FTPRB is located in the exemplification of the present invention. Human PTPRB is located
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New compositions comprising tyrosine phosphatase PTP10D, protein tyrosine kinase Tec or egg-derived tyrosine phosphatase genes or proteins, useful for treating or preventing metabolic diseases, e.g. as obesity or

dementia and various cancers

```
This invention relates to novel, isolated full length human cDNA clones and the encoded proteins thereof. Specifically, it refers to cDNA clones obtained by an oligo-capping method, where none of these clones are identical to any known human mRNAs. The present invention describes an immunoassay to identify agonists and antagonists, as well as articolates, antisense molecules and siRNAs that can all be used to bind to and modulate expression of the CDNA molecules. As such, these continuations of the CDNA molecules are useful for diagnostic markers or therapeutic targets for molecules are useful for diagnostic markers or therapeutic targets for the various disease, or morbid states. In particular, they are useful in gene therapy for treating osteoporosis, neurological disease, Alzheimer's disease, Parkinson's disease, dementia, short memory and various cancers, as well as for maintaining equilibrium of sense or motor function, and for treating emotional reaction, fear response and panic. Accordingly, they exhibit osteopathic, neuroprotective, nootropic, antiparkinsonian, cytostatic and tranquiliser activities. This polypeptide is a protein cencede by a full length human cDNA sequence of the invention. NOTE: This sequence is not given in the sequence listing of the specification but can be obtained on CD-ROM from the European Patent Office, Vienna Sub-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        KVTSYEVQLFDENNQKI QGVQI QESTSWNEYTFFNLTAGSKYNIAITAVSGGKRSFSVYT

LPGTKDDFWKMVWEQNVHNIVMVTQCVEKGRVKCDHYWPADQDSLYYGDLILQMLSESVL 1838 361 LPGTKDDFWKMAWEQNVHNIVMVTQCVEKGRVKCDHYWPADQDPLYYGDLILQMVSESVL 420 The present sequence is that of murine vascular-endothelial protein tyrosine phosphatase (WE-PTP). WE-PTP is a member of subclass III receptor type PTPs, bearing fibronectin type III-like repeats in the extracellular domain and a single catalytic domain in the cytoplasmic tail. WE-PTP specifically interacts with receptor-type tyrosine kinase Tie-2, modulating its tyrosine phosphorylation. Tie-2 is involved in andiogenetic processes, the formation of blood vessels during embryonal development, wound healing and in pathological processes such as tumour development. WE-PTP or its catalytic domain, nucleic acids and ligands can be used to monitor, stimulate or repress Tie-2 activity for the purpose of monitor, stimulate or repress Tie-2 activity for the purpose of monitoring or modulating angiogenesis, inducing or inhibiting vascular growth or remodelling and blood vessel maturation, and inhibiting tumour growth and metastasis | SSSKSFNIKLGAEMDSLGGKCDPSQQKFCDGPLLPHTAYRLSIRAFTQLFDEDLKEFTKP 241 IRRDRPLSVHLNLGQKGNRKTSCPIKINQFBGHFWKLQADSNYLLSKBYEDLKDVGRSQS LYSDTFFSLPITTESEPLFGAIBGVSAGLFLIGMLVAVVALLICRQKVSHGRERPSARLS 181 LYSDTFFSMPITTESEPLFGVIEGVSAGLFLIGMLVALVAFFICRQKASHSRERPSARLS CDIALLPENRGKNRYNNILPYDATRVKLSNVDDDPCSDYINASYIPGNNFRREYIVTQGP CDIALLPENRGKNRYNNILPYDASRVKLSNVDDDPCSDYINASYIPGNNFRREYIATQGP 1419 KRYLVSIKVQSAGWISEVVEDSTITWIDRPPPPPPHIRVNEKDVLISKASINFTVNCSWF KRYLVSIKVQSAGMTSEVVEDSTITMIDRPPQPPPHIRVNEKDVLISKSSINFTVNCSWF SNSKSFNIKLGAEMESLGGKRDPTQQKFCDGPLKPHTAYRISIRAFTQLFDEDLKEFTKP IRRDRPLSVHLNLGQKGNRKTSCPIKINQFEGHFMKLQADSNYLLSKEYEELKDVGRNQS Monitoring or modulating Tie-2 tyrosine kinase activity, useful e.g. regulating tumor growth, using vascular-endothelial protein tyrosine phosphatase. ö Length 579; Indels Query Match 28.0%; Score 2937; DB 3; Best Local Similarity 94.3%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to 2495 novel polynucleotides (I) and their encoded polypeptides, sequences hybridizing to these nucleotides, sequences encoding partial polypeptides and sequences having 70% or 90% identity to the nucleotide and protein sequences. The nucleotides and polypeptides are useful as diagnostic markers or therapeutic target for the diseases or morbid states. They are also useful for treating osteoporosis, neurological diseases, Alzheimer's diseases, Parkinson's diseases, dementia and various cancers. This sequence corresponds to a protein

It also relates to a method for the identification of a compound useful for the treatment of an angiogenesis mediated disorder. The compounds identified by this method are useful to treat diseases like diabetic retinopathy, sickle cell anaemia, Paget's disease, mycobacterial infections, systemic lupus erythematosus, myopia, crohn's disease, psoriasis, rheumatoid arthritis, solid or blood borne tumours and acquired immune deficiency syndrome (AIDS). The invention is useful for the treatment of an angiogenesis mediated disorder or disease. It is also unseful in drug design techniques. The present sequence is human HPTPbeta intracellular domain (ICD) protein.

identified by this method are useful to treat diseases like diabetic retinopathy, sickle cell anaemia, Paget's disease, mycobacterial infections, systemic lupus erythematosus, myopia, Crohn's disease, psoriasis, rheumatoid arthritis, solid or blood borne tumours and acquired immune deficiency syndrome (AIDS). The invention is useful for the treatment of an angiogenesis mediated disorder or disease. It is also useful in drug design techniques. The present sequence is human HPTPbeta protein catalytic domain.
                                                                                                                                                                                                                                                                             61

The invention relates to the three dimensional coordinates of HPTPbeta (also known as HPTP-beta, PTPB, PTPbeta, PTPB or R-PTP-beta) protein. It also relates to a method for the identification of a compound useful for the treatment of an angiogenesis mediated disorder. The compounds identified by this method are useful to treat diseases like diabetic retinopathy, sickle cell anaemia, Paget's disease, mycobacterial infections, systemic lupus erythematosus, myopia, Crohn's disease, psoriasis, rheumatoid arthritis, solid or blood borne tumours and acquired immune deficiency syndrome (AIDS). The invention is useful for the treatment of an angiogenesis mediated disorder or disease. It is also useful in drug design techniques. The present sequence is human HPTPbeta intracellular domain (ICD) truncated protein.
                                                                         Identification of compound useful for treatment of angiogenesis mediated disorder, by using three-dimensional structure of HPTPbeta catalyric domain, and employing structure to design, or select compound that binds HPTPbeta in silico.
                                                                                                                                                                                                            Disclosure; SEQ ID NO 6; 335pp; English.

Protein Sequence Searches - February 2005

All of the sequence databases on ABSS have recently been updated.

Please note that the curators of the UniProt database have purged some temporary accession numbers from the most recent version of UniProt. These sequences have been assigned new accession number.

If you encounter an accession number from an older search run against UniProt (results file extension .rup) that can no longer be found in the database, the permanent record with the new accession number can be found by searching the old accession number in the UniProt Protein Archive database (UniPARC) at:

http://www.pir.uniprot.org/database/archive.shtml

If you have any questions regarding this information or your results, please contact any STIC searcher.

When submitting sequence search results for scanning into IFW, please members of the public who may encounter UniProt temporary accession numbers.

TISSUE SPECIFICITY: Selectively expressed in anterior commissum
and its junctions with the longitudinal tracts.
SIMILARITY: Belongs to the protein-tyrosine phosphatase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Receptor class subfamily.
SIMILARITY: Contains 12 fibronectin type-III domains.
SIMILARITY: Contains 1 tyrosine-protein phosphatase domain.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   US-08-992-14

US-08-992-14

Sequence 14, Application US/08685992

Patent No. 5912138

GENERAL INFORMATION:

APPLICANT: Tonks, Nicholas

TITLE OF INVENTION: SUBSTRATE TRAPPING PROTEIN

TITLE OF INVENTION: TYROSINE PHOSPHATASES

NUMBER OF SEQUENCES: 36

CORRESPONDENCE ADDRESS:

ADDRESSEE: HAMILTON, BROOK, SMITH & REYNOLDS, P.C.

STREET: Two Militia Drive

CITY: Lexington

STATE: MA
                                                                                                                                           COMPUTER PALABLE FORM:

MEDIUM TYPE: Floppy disk
COMPUTER: IEM PC compatible
COMPUTER: IEM PC compatible
COMPUTER: IEM PC compatible
COMPUTER: IEM PC compatible
COMPUTER: PatentIn Release #1.0, Version #1.25
SOFTWARE: PatentIn Release #1.0, Version #1.25
GURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/201,697
FILING DATE: 25-FEB-1994
CLASSIFICATION: SAND
ATTORNEY/AGENT INFORMATION:
NAME: Campbell, Cathryb A.
REGISTRATION NUMBER: 31,815
REFERENCE/DOCKET NUMBER: 9-UM 9783
TELECOMMUNICATION INFORMATION:
TELEFRAX: (619) 535-8049
INFORMATION FOR SEQ ID NO: 16:
SEQUENCE CHARACTERISTICS:
LENGTH: 278 amino acids
TYPE: amino acid
TOPOLOGY: linear
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1922 QQLDSKDSVDIYGAVHDLRLHRVHMVQTECQYVYLHQC 1959
